

## Python Lab 2

- Write a Python function to check whether a number falls in a given range. Range (-5, 5) -> return TRUE
- Write a Python program to convert two lists into a dictionary in a way that item from list1 is the key and item from list2 is the value.
- Write a Python function to create and print a list where the values are square of numbers between 1 and 30 (both included).
- Write a Program that takes a list of 5 numbers [3,6,4,0,8] then
  - a. Remove the last element in list .
  - b. Add in the second place 'R'.
  - c. Ask the user to input specific number in list then delete it { by taking the list element not index}.
- Create 2 dictionaries and append the two in one .{take into consideration unique keys }
